

Oily Skin - Skincare Recommendation Knowledge Entry

Skin type

- Oily skin, including oily skin that is acne-prone or prone to breakouts and shine.

Recommended product categories

- Exfoliating cleanser, including cleansers or washes with salicylic acid.
- Exfoliating toner containing salicylic acid, glycolic acid, or lactic acid.
- Acne/oil-control treatments such as benzoyl peroxide or sulfur for daytime use.
- Retinol product for evening use.
- Lightweight moisturizer for morning and evening.
- Sunscreen with at least SPF 30.
- Blotting papers for excess oil during the day.
- OTC products with effective active ingredients; dermatologist-directed treatments if OTC products do not help.

Preferred product characteristics

- Moisturizer: lightweight, oil-free, noncomedogenic, and water-based.
- Products formulated for acne-prone skin are presented as fitting the moisturizer criteria above.
- Sunscreen: at least SPF 30; the article also mentions sunscreens containing titanium dioxide or zinc oxide.
- The article notes that the term "natural" is not regulated across the industry.

Products or practices to avoid

- Avoid products containing alcohol, which the article says can increase oil secretion.
- Avoid thick or greasy products such as cocoa butter, shea butter, and Vaseline.
- Do not skip cleansing after exercise or skip sunscreen.
- Benzoyl peroxide and salicylic acid can cause irritation; use them as instructed.
- Do not take oral isotretinoin without a dermatologist's advice.

Important considerations

- Suggested daily routine: cleanse, tone, treat, and moisturize in both the morning and evening.
- Treatment depends on the specific concern. For acne-prone skin, the article suggests benzoyl peroxide or sulfur in the daytime and retinol in the evening.
- Cleansing should remove dirt, sebum, and bacteria without stripping moisture.
- Benzoyl peroxide can be drying and irritating; start slowly and check for irritation.
- After exercise, cleanse as soon as practical and apply a light layer of moisturizer.
- Blotting papers can be gently pressed on skin as needed during the day to absorb excess oil.
- If OTC products do not help, the article recommends seeing a dermatologist; oral isotretinoin is described as a dermatologist-directed option.
- Home-remedy ingredients mentioned include honey, oatmeal, and jojoba; they are presented as possible options, not core routine requirements.
